

Lively Lions (Possessive Apostrophes)

Read the text below. Insert any missing 'possessive' apostrophes.

Lions bodies are designed for strength and speed. Their powerful shoulders and strong legs help with the prides hunting routines. A male lions mane protects its neck during fights with other lions. A female lions role is usually to do most of the prides hunting while the male lions job is to defend the groups territory.

A lions sharp claws can grip the ground as it sprints toward its prey. The prides cubs learn important hunting skills from their mothers behaviour. Sometimes cubs will copy an older lions movements as they practise.

When night arrives, lions golden eyes help them see clearly in the darkness. The groups favourite places to rest are under trees branches or near a rivers edge where it's cool. They often return to the prides special resting spots every day.

Each cubs playful personality shows as it chases its brothers tails or hides behind its sisters back. During the hottest part of the day, the prides younger members enjoy climbing over their parents bodies and nibbling at their ears.

A lions life is not always easy. The groups survival depends on the areas available water and food. If another prides lions come too close, there might be loud roaring and fierce battles over the plains wide grasslands.

Terrific Tigers (Contraction Apostrophes)

Read the text below. Insert any missing 'contraction' apostrophes.

Tigers are amazing hunters and theyre incredibly patient animals. They dont always rush or chase because theyre clever enough to wait quietly. If theyre hidden in tall grass, their prey wont even know theyre watching. Theyre silent and they dont give up easily.

Tigers live alone and theyre very protective of their space. Theyre rarely seen together unless theyre a mother with cubs. If theyre hungry, theyll search for food until theyre satisfied. When theyre finished eating, theyll hide whats left so other animals wont steal it.

Sometimes tigers wont move for hours because theyre saving energy. Theyre powerful swimmers, so they dont mind crossing rivers. They wont hesitate to jump straight into deep water either. If theyre chasing food, theyll leap in without worrying about getting wet.

Most tigers prefer forests where theres shade and water. Theyre comfortable hunting at night, and theyre excellent at using shadows. They wont make noise unless theyre threatened or surprised. If a tiger gets angry, it wont back down easily.

Even though tigers are strong, theyre still endangered. If people dont protect their homes, we wont have many left in the future. Theyre a precious part of nature and we shouldnt forget how important they are.
